Evidence and Interpretation

Checkpoint: November 19, 2026, by 11:59 PM Mountain Time
Team: [Names]
Route: [A / B / C]
Date: [Date]

Add a new, dated entry to the root `README.md` of your team's GitHub repository. Link the code, results, and figures or tables that support your summary. Keep earlier entries, commit the update, and submit the repository URL with that commit in Canvas. This file is optional supporting material; preliminary or negative results are welcome.

Evidence so far

- **Route A:** Compare the new component with its reference under comparable conditions. What changed, and what does the evidence suggest?
- **Route B:** Compare the pipelines using local validation and any Kaggle results available. What substantive design change did you make, and did results improve or degrade? Link each result to its pipeline and run configuration.
- **Route C:** Show what the quality checks say about the dataset and what an ML result says about its usefulness for your question. Link both kinds of evidence.

Interpretation and next step

- Describe one informative error, failure, tradeoff, or limitation. How does it affect your conclusion?
- What did the evidence change in your thinking, and what will you test or revise next?
