Data and Reference Result

Checkpoint: November 5, 2026, by 11:59 PM Mountain Time
Team: [Names]
Date: [Date]

Use any prompts that help you describe your progress. Add a dated entry to the root `README.md` of your team's repository and link the relevant code and output there; this file is optional supporting material.

Data

- Where did the data come from, and how did you obtain or prepare them?
- What data are available to your team now? What remains to be collected or cleaned?
- **Route C:** What does your first collected and cleaned sample contain?

Evaluation plan

- What comparison, split, metric, or diagnostic will help answer your question? Why?
- How will you avoid data leakage or another misleading comparison?
- **Route B:** How will you validate locally before making a Kaggle submission?

First runnable result

- What baseline or other reference did you run? What did it produce?
- Where are the code and output? Link them, and include the command needed to rerun the result if available.
- What did this first result suggest, and what will you try next?
