STAT 486 Project Presentation Scoring Sheet

Use this sheet to score the **20-point presentation** during the team's assigned class meeting. The project brief is the source for requirements; the overall rubric gives the four presentation categories used below. Score what the team communicates in the talk and questions. The repository and written report receive their own scores.

Team: _____ **Route:** A / B / C **Date:** _____ **Presentation length:** _____

Score the item rows; bold category rows are subtotals.

Category and item	Points	Score	Evidence or note
Project story	**5**	**___**	
Question and motivation: The audience can identify the question or goal and why the team chose it.	2	___	
Route and contribution: The team identifies its route and what it designed, built, or investigated.	1	___	
Coherent path: The main decisions and steps follow a clear line from question to evidence.	2	___	
Work and evidence	**7**	**___**	
Work and choices: The team explains the data, ML approach, and design choices that mattered.	2	___	
Evaluation and evidence: Readable results, comparisons, examples, or a demonstration support the main claims; the team explains what was measured.	3	___	
Route-specific investigation: The talk shows the central work and comparison for its route, as described below.	2	___	
Outcomes and reflection	**5**	**___**	

Category and item	Points	Score	Evidence or note
Outcome: The team states what it found or produced and draws conclusions supported by its evidence.	2	___	
Challenge and limitation: The team explains a meaningful obstacle, failure, uncertainty, or boundary of its conclusion and how it responded or would interpret it.	2	___	
Learning and next step: The team offers a specific lesson or sensible next investigation.	1	___	
Delivery and participation	**3**	**___**	
Communication: Slides or demonstration, if used, are legible and help the audience follow the explanation. Spoken explanations are clear.	1	___	
Timing: The talk is planned for about 12–15 minutes and uses the allotted time effectively.	1	___	
Team and questions: Every member presents a meaningful part and the team responds thoughtfully to questions.	1	___	
Total	**20**	**___**	

Route-specific evidence for the 2-point item

- **A — Develop something new:** Explain the team's designed component, why it might help, and what happened when it was compared with a suitable reference under comparable conditions.
- **B — Kaggle:** Explain the design change and reason for it between **two meaningfully different pipelines**, each used for a valid submission. Compare local validation and Kaggle results for both, including any improvement or degradation and a useful error or leaderboard discrepancy.
- **C — Build a dataset:** Explain what the team collected or combined, consequential cleaning or quality checks, and how the resulting dataset fed an ML analysis. Show evidence about both data quality and what the ML result can or cannot tell the team.

Scoring guide

Award the listed points when an item is clear and supported. Give partial credit when it is present but incomplete or hard to follow; give zero when it is absent or cannot be assessed. Half-points are allowed. Judge the quality of the investigation and explanation, not whether a method improved accuracy, a Kaggle rank was high, or a result was positive. A live demonstration is optional; a failed live demo can still earn evidence points when the team clearly presents saved results and explains what happened. Avoid counting the same weakness in multiple items unless it independently affects each one.

Strongest aspect:

Most useful improvement or question for the team:
